TITLE OF THE INVENTION  
FIBRINOGEN RECEPTOR ANTAGONISTS

BACKGROUND OF THE INVENTION

5           The invention relates generally to modulating cRe:  
          Patenthe binding of fibrinogen and other proteins to blood  
platelets, and inhibiting the aggregation of blood platelets specifically to  
the IIb/IIIa fibrinogen receptor site. Fibrinogen is a glycoprotein  
present in blood plasma that participates in platelet aggregation and in  
10       fibrin formation. Platelets are anucleated cells, found in the blood of all  
mammals, that also participate in blood coagulation. Interaction of  
fibrinogen with the IIb/IIIa receptor site is known to be essential for  
normal platelet function.

15           When a blood vessel is damaged by an injury or other  
causative factor, platelets adhere to the disrupted subendothelial surface.  
The adherent platelets subsequently release biologically active  
constituents and aggregate. Aggregation is initiated by the binding of  
agonists, such as thrombin, epinephrine, or ADP to specific platelet  
membrane receptors. Stimulation by agonists results in exposure of  
20       latent fibrinogen receptors on the platelet surface, and binding of  
fibrinogen to the glycoprotein IIb/IIIa receptor complex.

          Attempts have been made to use natural products and  
synthetic peptides to determine the mechanism of adhesion and platelet  
aggregation. For example, Rouslahti and Pierschbacher in Science, 238,  
25       491-497 (1987), describe adhesive proteins such as fibronectin,  
vitronectin, osteopontin, collagens, thrombospondin, fibrinogen, and  
von Willebrand factor that are present in extracellular matrices and in  
blood. These proteins contain the tripeptide sequence arginine-glycine-  
aspartic acid (RGD) as their glycoprotein IIb/IIIa recognition site.  
30       These arginine-glycine-aspartic acid containing tripeptides are  
recognized by at least one member of a family of structurally related  
receptors, integrins, which are heterodimeric proteins with two  
membrane-spanning subunits. The authors state that the conformation

- 2 -

of the tripeptide sequence in the individual proteins may be critical to recognition specificity.

Cheresh in Proc. Nat'l Acad. Sci. U.S.A., 84, 6471-6475, (1987), describes an Arg-Gly-Asp directed adhesion receptor expressed by human endothelial cells that is structurally similar to the IIb/IIIa complex on platelets but is antigenically and functionally distinct. This receptor is directly involved in endothelial cell attachment to fibrinogen, von Willebrand factor, and vitronectin.

Pierschbacher and Rouslahti, in J. of Biol. Chem., 262, (36), 17294-17298 (1987) hypothesized that the Arg-Gly-Asp sequence alone would be a sufficient signal for receptor recognition and binding and that, therefore, the conformation of the tri-peptide sequence would be determinative. Various synthetic peptides were produced and the authors concluded that the stereochemical conformation of Arg-Gly-Asp as influenced by enantiomeric substitutions or additions to this sequence significantly influenced receptor-ligand interaction. The authors further showed that cyclization of a decapeptide by forming a disulfide bridge between non-terminal residues Pen and Cys, rendered the peptide much less effective at inhibiting attachment to fibronectin.

In Proc. Nat'l Acad. Sci. U.S.A., 81, 5985-5988 (1984), the same authors describe tetrapeptide variants of the cell recognition site of fibronectin that retain attachment-promoting activity. Peptides having a tetrapeptide recognition site are described in U.S. Pat. Nos. 4,589,881 and 4,614,517. A number of large polypeptide fragments in the cell-binding domain of fibronectin have cell-attachment activity. For example, see U.S. Pat. Nos. 4,517,686, 4,661,111 and U.S. Pat. No. 4,578,079.

Ruggeri et al., Proc. Nat'l Acad. Sci. U.S.A., 83, 5708-5712 (1986) explore a series of synthetic peptides designed in lengths to 16 residues, that contain RGD and a valine attached to the aspartic acid residue of RGD that inhibit fibrinogen binding to platelets. See also Koczewiak et al., Biochem. 23, 1767-1774 (1984); Ginsberg et al., J. Biol. Chem. 260(7), 3931-3936 (1985); and Haverstick et al., Blood

- 3 -

66(4), 946-952 (1985). Other inhibitors are disclosed in Eur. Pat. App. Nos. 275,748 and 298,820.

A number of low molecular weight polypeptide factors have been isolated from snake venom. These factors apparently have high affinity for the gpIIb/IIIa complex. For example, Huang *et al.*, J. Biol. Chem., 262, 16157-16163 (1987); Huang *et al.*, Biochemistry 28, 661-666 (1989) describe the primary structure of the venom trigramin which is a 72 amino acid polypeptide that contains the RGD subunit. Echistatin is another venom which has high affinity for the gpIIb/IIIa complex. This polypeptide contains 49 amino acids and has the RGD subunit and various disulfide bridges. Gan *et al.*, J. Biol. Chem., 263, 19827-19832 (1988). See also, Dennis *et al.*, Proc. Nat'l Acad. Sci. USA, 87, 2471-2475 (1989). However, these snake venom factors also have high affinity for other members of the adhesive protein receptor family including the vitronectin and fibronectin receptors so are not selective for the gpIIb/IIIa complex.

While it is known that the tripeptide sequence Arg-Gly-Asp is present in certain polypeptides that can duplicate or inhibit the cell attachment-promoting effects of fibronectin and vitronectin, the tripeptide Arg-Gly-Asp has low activity. At present, there is little understanding of how other amino acids coupled to this sequence influence binding specificity. U.S. Pat. No 5,023,233, assigned to Merck & Co., Inc., discloses small cyclic hexapeptides which contain the sequence Arg-Gly-Asp and are useful platelet aggregation inhibitors. U.S. Pat. No. 5,037,808 discloses the use of indolyl platelet-aggregation inhibitors which are believed to act by antagonizing interactions between fibrinogen and/or extracellular matrix proteins and the platelet gpIIb/IIIa receptor. U.S. Pat. No. 5,037,808 discloses guanidino peptide mimetic compounds that retain an Asp residue which inhibit platelet aggregation. The application PCT/US90/02746 describes the use of antibody-polypeptide conjugates wherein said polypeptides contain the Arg-Gly-Asp (RGD) sequence.

The application PCT/US91/00564 discloses the use of large cyclic peptides containing RGD flanked by proline residues which are

- 4 -

platelet aggregation inhibitors. The application PCT/US90/03788 discloses small cyclic platelet aggregation inhibitors which are synthetic cyclic pentapeptides containing the tripeptide sequence Arg-Gly-Asp and a thioether linkage in the cycle. The application PCT/US90/05367  
5 published May 2, 1991 also discloses the use of peptides and pseudopeptides such as N-amidino-piperidine-3-carboxylglycyl-L-aspartyl-L-valine that inhibit platelet aggregation and thrombus formation in mammalian blood. The application Eur. Pat. App. No. 91103462.7 discloses linear compounds which can include internal  
10 piperazinyl or piperidinyl derivatives. Eur. Pat. App. No. 91300179.8, assigned to Merck & Co., Inc., and published on July 17, 1991 discloses linear polypeptide fibrinogen receptor antagonists. Eur. Pat. App. No. 90101404.3 discloses compounds of the  $R^1-A-(W)_a-X-(CH_2)_b-(Y)_c-B-Z-COOR$  wherein  $R^1$  is a guandidino or amidino moiety and A and B  
15 are chosen from specific monosubstituted aryl or heterocyclic moieties.

While a multitude of compounds or peptide analogs believed to inhibit platelet aggregation by inhibiting binding to a blood platelet by fibrinogen are known, the present invention provides novel  
20 fibrinogen receptor antagonists that have significant binding activity and are, therefore, useful for the reasons stated herein. A number of very serious diseases and disorders involve hyperthrombotic complications which lead to intravascular thrombi and emboli. Myocardial infarction, stroke, phlebitis and a number of other serious conditions create the  
25 need for novel and effective fibrinogen receptor antagonists.

#### SUMMARY OF THE INVENTION

The invention is a fibrinogen receptor antagonist of the formula:

#### DETAILED DESCRIPTION OF THE INVENTION

The term "pharmaceutically acceptable salts" shall mean  
 non-toxic salts of the compounds of this invention which are generally  
 prepared by reacting the parent compound with a suitable organic or  
 20 inorganic acid or base. Representative salts include the following salts:  
 Acetate, benzenesulfonate, benzoate, bicarbonate, bisulfate, bitartrate,  
 borate, bromide, calcium edetate, camsylate, carbonate, chloride,  
 clavulanate, citrate, dihydrochloride, edetate, edisylate, estolate, esylate,  
 25 fumarate, gluceptate, gluconate, glutamate, glycolylarsanilate,  
 hexylresorcinate, hydrabamine, hydrobromide, hydrochloride,  
 hydroxynapthoate, iodide, isothionate, lactate, lactobionate, laurate,  
 malate, maleate, mandelate, mesylate, methylbromide, methylnitrate,  
 methylsulfate, mucate, napsylate, nitrate, oleate, oxalate, pamaote,  
 30 palmitate, panthothenate, phosphate/diphosphate, polygalacturonate,  
 salicylate, stearate, subacetate, succinate, tannate, tartrate, teoclate,  
 tosylate, triethiodide, valerate.

The term "pharmaceutically effective amount" means that  
 amount of a drug or pharmaceutical agent that will elicit the biological  
 or medical response of a tissue, system or animal that is being sought by

- 14 -

a researcher or clinician. The term "anti-coagulant" shall include heparin, and warfarin. The term "thrombolytic agent" shall include streptokinase and tissue plasminogen activator. The term "platelet anti-aggregation agent" shall include aspirin and dipyridamole.

5           The term "alkyl" means straight or branched alkane, alkene or alkyne. The term "alkoxy" includes an alkyl portion where alkyl is as defined above.

10           The terms "arylalkyl" and "alkylaryl" include an alkyl portion where alkyl is as defined above and to include an aryl portion where aryl is as defined above. The C<sub>0-n</sub> or C<sub>1-n</sub> designation where n may be an integer from 1-10 or 2-10 respectively refers to the alkyl component of the arylalkyl or alkylaryl unit.

15           The term "halogen" includes fluorine, chlorine, iodine and bromine.

20           Under standard nomenclature used throughout this disclosure, the terminal portion of the designated side chain is described first followed by the adjacent functionality toward the point of attachment. For example, a C<sub>1-6</sub> alkyl substituted with C<sub>1-6</sub> alkylcarbonylamino is equivalent to

25           The term "Aryl" is different from the term "aryl", wherein "Aryl" is defined in its broadest scope as a 6-membered monocyclic aromatic ring system containing 1, 2, 3 or 4 N atoms, and either unsubstituted or substituted. The term "aryl" is now defined to be a mono- or polycyclic ring system containing 0, 1, 2, 3, 4 or 5  
30           heteroatoms chosen from N, O and S, comprised of 5- or 6- membered rings, either unsubstituted or substituted with substituents chosen from R<sub>1</sub> and R<sub>2</sub>.

In the schemes and examples below, various reagent symbols have the following meanings:

- 15 -

	BOC(Boc):	t-Butyloxycarbonyl.
	Pd/C:	Palladium on activated carbon catalyst.
	DEAD:	Diethylazodicarboxylate.
	DIAD:	Diisopropylazodicarboxylate.
5	DMF:	Dimethylformamide.
	DMSO:	Dimethylsulfoxide.
	CBZ:	Benzyloxycarbonyl.
	CH <sub>2</sub> Cl <sub>2</sub> :	Methylene chloride.
	CHCl <sub>3</sub> :	chloroform.
10	EtOH:	ethanol.
	MeOH:	methanol.
	EtOAc:	ethyl acetate.
	HOAc:	acetic acid.
15	BOP:	Benzotriazol-1-yloxytris(dimethylamino)phosphonium, hexafluorophosphate.
	EDC:	1-(3-Dimethylaminopropyl)-3-ethylcarbodiimide.
	Oxone:	potassium peroxydisulfate.
	LDA:	Lithium diisopropylamide.
	CDI:	Carbonyldiimidazole.
20	NMM:	N-Methylmorpholine.
	DIPEA:	Diisopropylethylamine.
	TMSI:	Trimethylsilyliodide.
	TFA:	Trifluoroacetic acid.
25	py:	Pyridine.

The compounds of the present invention can be administered in such oral forms as tablets, capsules (each of which includes sustained release or timed release formulations), pills, powders, granules, elixers, tinctures, suspensions, syrups, and emulsions.

30 Likewise, they may be administered in intravenous (bolus or infusion), intraperitoneal, subcutaneous, or intramuscular form, all using forms well known to those of ordinary skill in the pharmaceutical arts. An effective but non-toxic amount of the compound desired can be employed as an anti-aggregation agent.

- 16 -

Compounds of the invention may be administered to patients where prevention of thrombosis by inhibiting binding of fibrinogen to the platelet membrane glycoprotein complex IIb/IIIa receptor is desired. They are useful in surgery on peripheral arteries (arterial grafts, carotid endarterectomy) and in cardiovascular surgery where manipulation of arteries and organs, and/or the interaction of platelets with artificial surfaces, leads to platelet aggregation and consumption. The aggregated platelets may form thrombi and thromboemboli. They may be administered to these surgical patients to prevent the formation of thrombi and thromboemboli.

Extracorporeal circulation is routinely used for cardiovascular surgery in order to oxygenate blood. Platelets adhere to surfaces of the extracorporeal circuit. Adhesion is dependent on the interaction between gpIIb/IIIa on the platelet membranes and fibrinogen adsorbed to the surface of the circuit. (Gluszko et al., Amer. J. Physiol., 252(H), 615-621 (1987)). Platelets released from artificial surfaces show impaired hemostatic function. Compounds of the invention may be administered to prevent adhesion.

Other applications of these compounds include prevention of thrombosis, thromboembolism and reocclusion during and after thrombolytic therapy and prevention of thrombosis, thromboembolism and reocclusion after angioplasty or coronary artery bypass procedures. They may also be used to prevent or modulate myocardial infarction.

The dosage regimen utilizing the compounds of the present invention is selected in accordance with a variety of factors including type, species, age, weight, sex and medical condition of the patient; the severity of the condition to be treated; the route of administration; the renal and hepatic function of the patient; and the particular compound or salt thereof employed. An ordinarily skilled physician or veterinarian can readily determine and prescribe the effective amount of the drug required to prevent, counter, or arrest the progress of the condition.

In the methods of the present invention, the compounds herein described in detail can form the active ingredient, and are

- 17 -

typically administered in admixture with suitable pharmaceutical diluents, excipients or carriers (collectively referred to herein as "carrier" materials) suitably selected with respect to the intended form of administration, that is, oral tablets, capsules, elixers, syrups and the like, and consistent with convention pharmaceutical practices.

For instance, for oral administration in the form of a tablet or capsule, the active drug component can be combined with an oral, non-toxic, pharmaceutically acceptable, inert carrier such as lactose, starch, sucrose, glucose, methyl cellulose, magnesium stearate, dicalcium phosphate, calcium sulfate, mannitol, sorbitol and the like; for oral administration in liquid form, the oral drug components can be combined with any oral, non-toxic, pharmaceutically acceptable inert carrier such as ethanol, glycerol, water and the like. Moreover, when desired or necessary, suitable binders, lubricants, disintegrating agents and coloring agents can also be incorporated into the mixture. Suitable binders include starch, gelatin, natural sugars such as glucose or beta-lactose, corn-sweeteners, natural and synthetic gums such as acacia, tragacanth or sodium alginate, carboxymethylcellulose, polyethylene glycol, waxes and the like. Lubricants used in these dosage forms include sodium oleate, sodium stearate, magnesium stearate, sodium benzoate, sodium acetate, sodium chloride and the like. Disintegrators include, without limitation, starch methyl cellulose, agar, bentonite, xanthan gum and the like.

The compounds of the present invention can also be administered in the form of liposome delivery systems, such as small unilamellar vesicles, large unilamellar vesicles and multilamellar vesicles. Liposomes can be formed from a variety of phospholipids, such as cholesterol, stearylamine or phosphatidylcholines.

Compounds of the present invention may also be delivered by the use of monoclonal antibodies as individual carriers to which the compound molecules are coupled. The compounds of the present invention may also be coupled with soluble polymers as targetable drug carriers. Such polymers can include polyvinylpyrrolidone, pyran copolymer, polyhydroxypropyl-methacrylamide-phenol, polyhydroxy-

- 18 -

ethyl-aspartamide-phenol, or polyethyleneoxide-polylysine substituted with palmitoyl residues. Furthermore, the compounds of the present invention may be coupled to a class of biodegradable polymers useful in achieving controlled release of a drug, for example, polylactic acid, polyglycolic acid, copolymers of polylactic and polyglycolic acid, polyepsilon caprolactone, polyhydroxy butyric acid, polyorthoesters, polyacetals, polydihydropyrans, polycyanoacrylates and cross linked or amphipathic block copolymers of hydrogels.

The compounds of the present invention can also be co-administered with suitable anti-coagulation agents or thrombolytic agents such as plasminogen activators or streptokinase to achieve synergistic effects in the treatment of various vascular pathologies. They may also be combined with heparin, aspirin, or warfarin.

Preferred compounds of the invention are selected from the group consisting of:

30 Platelet aggregation is measured at 37°C in a Chronolog aggregometer. The reaction mixture contains gel-filtered human platelets ( $2 \times 10^8$  per ml), fibrinogen (100 micrograms per ml (ug/ml)),  $\text{Ca}^{2+}$  (1mM), and the compound to be tested. The aggregation is initiated by adding 10  $\mu\text{M}$  ADP 1 minute after the other components are

- 24 -

added. The reaction is then allowed to proceed for at least 2 minutes. The extent of inhibition of aggregation is expressed as the percentage of the rate of aggregation observed in the absence of inhibitor. The IC<sub>50</sub> is the dose of a particular compound inhibiting aggregation by 50% relative to a control lacking the compound.

Activities of some of the preferred compounds, characterized by IC<sub>50</sub> for inhibition of ADP-mediated platelet aggregation, are listed below:

	IC <sub>50</sub>

The novel compounds of the present invention were prepared according to the procedure of the following examples. The most preferred compounds of the invention are any or all of those specifically set forth in these examples. These compounds are not, however, to be construed as forming the only genus that is considered as the invention, and any combination of the compounds or their moieties may itself form a genus. The following examples further illustrate details for the preparation of the compounds of the present invention. Those skilled in the art will readily understand that known variations of the conditions and processes of the following preparative procedures can be used to prepare these compounds. All temperatures are degrees Celsius unless otherwise noted.

Compounds of the present invention are prepared from dicarboxylic acids by a sequence of carboxyl activation with CDI or other suitable reagent, followed by amide bond formation. In this manner, representative compounds of Schemes 1, 2, 3 and 7 may be prepared using amines that have been previously protected as esters or carbamates. Subsequent to coupling with, for example, a CBZ-protected amine, the product may be deprotected at a N site and

- 26 -

functionalized to a sulfonamide or amide via sulfonylating or acylating reagents, respectively.

5 Differentially functionalized chlorosulfonyl benzoic acids, as shown in Schemes 3 and 4, may be prepared from the corresponding sulfonic acid and, via treatment with appropriate amines, provide functionalized aryl sulfonamides. Subsequent activation of carboxyl groups followed by amide bond formation may provide further examples of desired compounds.

10 Ether analogs, such as shown in Schemes 9 and 13 may be prepared by treatment of the appropriate hydroxy carboxylic acid with a base, such as NaH, to form the alkoxide followed by reaction with an alkylating agent. This alkylating agent may encompass suitably protected amine components. Subsequent to alkylation, carboxyl activation and amide formation may provide advanced synthetic  
15 intermediates. Deprotection as appropriate may then provide key products of the present invention.

In addition to the following preparative procedures, several examples of in-vitro bioactivity of compounds within the scope of the present invention are indicated. To illustrate, one test which is used to  
20 evaluate fibrinogen receptor antagonist activity is based on evaluation of inhibition of ADP-stimulated platelets. Aggregation requires that fibrinogen bind to and occupy the platelet fibrinogen receptor site. Inhibitors of fibrinogen binding inhibit aggregation. In the ADP-stimulated platelet aggregation assay used to determine inhibition  
25 associated with the compounds claimed in the instant invention, human platelets are isolated from fresh blood, collected into acid citrate/dextrose by differential centrifugation followed by gel filtration on Sepharose 2B in divalent ion-free Tyrode's buffer (pH 7.4) containing 2% bovine serum albumin.

2-(N-Boc-4-Piperidinyl)ethyl iodide (1-4)

1-4 is prepared according to the procedure described in European Publication 540,334, specifically at pages 17-18 and 21 of that publication, for preparing compound 1-6 of EP 540,334. Boc-4-piperidine-2-ethanol (10.42g, 0.048 moles) was dissolved in benzene (400 ml), and imidazole (4.66g, 0.068 moles) and triphenylphosphine (13.24g, 0.05 moles) were added at room temp, followed by iodine (12.9 g, 0.05 mol). After 6 hours the reaction mixture was filtered and the filtrate was evaporated to give a dark residue. This was purified by flash chromatography on silica gel eluting with 10% EtOAc/hexanes to give 1-4 as a yellow oil. R<sub>f</sub> 0.3 (silica, 10% EtOAc/hexanes).

20

2-(N-Boc-4-Piperidinyl)ethyl azide (1-5)

To 1-4 (27.9g, 0.082 moles) dissolved in DMSO (400 ml) was added sodium azide (5.61g, 0.086 moles) at room temperature and the resulting solution was heated at 65° for 2 hrs. The cooled reaction mixture was diluted with 250 ml EtOAc, extracted with 2x100 ml portions of water, 2x50 ml portions of brine and then dried (MgSO<sub>4</sub>). Solvent removal provided 1-5 as a pale yellow oil, R<sub>f</sub> 0.5 (silica gel, 20% acetone/hexane).

30

- 29 -

2-(N-Boc-4-Piperidinyl)ethyl amine (1-6)

To a solution of 1-5 (19.3g, 0.076 moles) in THF (400 ml)/H<sub>2</sub>O (195 ml) was added triphenylphosphine (80.0g, 0.305 moles) in one portion at room temperature. This was stirred for 3 hours and the solvent was then removed in vacuo. The residue was acidified to pH 2 with 10% KHSO<sub>4</sub> solution and this was extracted with 4x100 ml portions of EtOAc. The organic extract was extracted with 2x100 ml portions of 10% KHSO<sub>4</sub> and the aqueous phases were combined and the pH was adjusted to pH 10 with 2N NaOH. This solution was extracted with EtOAc and the organic phase was dried (MgSO<sub>4</sub>), and the solvent was removed to give 1-6 as a yellow liquid, R<sub>f</sub> 0.3 (silica gel 10% CH<sub>3</sub>OH in CHCl<sub>3</sub>/NH<sub>3</sub>),  
<sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 4.05 (broad, 2H), 2.72 (t, J=7.2Hz, 2H), 2.62 (m, 2H), 1.64 (d, J=12.2Hz, 2H), 1.43 (s, 9H), 1.42-1.32 (m, 5H), 1.09 (m, 2H).

1-3[N-2-(4-Piperidylethyl)-N'-(2-carboxyethyl)]-1,3-benzenedicarboxamide (1-3)

To 1,3-benzenedicarboxylic acid (Aldrich) (0.36g, 0.22 mmoles) in 3 ml DMF was added carbonyldiimidazole (CDI) (0.71g, 0.44 mmoles) in small portions as the reaction mixture vigorously evolved gas. After stirring at room temperature for 0.5 hr 1-6 (0.5g, 0.22 mmoles) in 2 ml DMF was added and the resulting solution was stirred for 12 hours. Then, N-methyl-morpholine (NMM) (0.72 ml, 0.66 mmoles) was added followed by β-alanine ethyl ester (0.33g, 0.22 mmoles) and the resulting mixture was stirred at room temperature for 6 hours.

- 30 -

The solvent was removed and the residue was taken up in H<sub>2</sub>O, acidified with 10% aqueous KHSO<sub>4</sub> solution, and this was extracted with EtOAc. To a solution of 1,3-benzenedicarboxylic acid (0.27 g, 1.66 mmol) in 10 ml DMF was added carbonyl diimidazole (CDI) (0.54 g, 3.32 mmol) at 0° and this was stirred for 1.0 hour. Then, 1-6 (0.38 g, 1.66 mmol) was added and the resulting solution was stirred for 4.0 hrs. Methyl 2(S),3-diaminopropionate (9-8) (0.315 g, 1.66 mmol) and N-methylmorpholine (NMM) (4.98 mmol) were added and the resulting solution was stirred for 16 hours. The solvent was removed and the residue was dissolved in H<sub>2</sub>O, acidified with 10% KHSO<sub>4</sub> solution and extracted with EtOAc. The aqueous phase was adjusted to pH 10 and extracted with EtOAc. Solvent removal provided 2-2 as a gum (0.45 g).

Methyl 4-methyl-3-trifluoromethanesulfonyloxybenzoate (2-20b)

A solution of methyl 4-methyl-3-hydroxybenzoate (2-20a) (20.0 g, 0.12 moles) [prepared from the corresponding carboxylic acid (Aldrich) by treatment with a methanolic solution of HCl gas] in CH<sub>2</sub>Cl<sub>2</sub> (900 ml) was cooled to -40°C and treated successively with 2,6-lutidine (0.18 moles), DMAP (2.9 g, 0.024 moles) and trifluoromethylsulfonyl anhydride (0.18 moles). The cooling bath was then removed and the resulting mixture was stirred at ambient temperature for 2.0 hours. The solvent was then removed and the residue was purified by flask chromatography on silica eluting with hexane(8)/-EtOAc(2) to provide pure 2-20b, R<sub>f</sub> 0.35.

<sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 2.18 (3H, s), 3.85 (3H, s), 7.30 (1H, d), 7.84 (1H, s), 7.90 (1H, d).

Dimethyl 4-methylbenzene-1,3-dicarboxylate (2-20)

A solution of 2-20b (30.0 g, 0.121 moles) in methanol/300 ml was treated successively with DMSO (180 ml), triethylamine (0.278 moles), palladium acetate (0.807 g, 3.6 mmols) and dppp (1.48 g, 3.6 mmols) as the reaction turned to a clear dark brown solution. Carbon monoxide was then bubbled through the reaction mixture for 3 minutes and the resulting mixture was heated at reflux, while continuing to bubble CO. After refluxing for 4 hours the reaction mixture was concentrated and the resulting brown oil was purified by flask chromatography on silica gel eluting with hexane(90)/EtOAc(10) to provide pure 2-20.

#### 4-Methyl-1,3-benzenedicarboxylic acid (2-21)

A solution of 2-20 (1.5 g, 7.2 mmol) in THF/MeOH/H<sub>2</sub>O (1:1:1) (36 ml) at room temperature was treated with LiOH·H<sub>2</sub>O (1.5 g, 36 mmol). After stirring for 3 hours, the solvent was removed and the residue acidified with 1N HCl. This was extracted with EtOAc, and the extract was dried (MgSO<sub>4</sub>) and concentrated to give 2-21.

<sup>1</sup>H NMR (300 MHz, CD<sub>3</sub>OD) δ 2.65 (3H, s), 7.40 (1H, d), 8.03 (2H, d), 8.56 (1H, s).

#### 4-Methyl-3-carboxy-N-2-(t-butyloxycarbonyl)ethyl-benzenecarboxamide (2-22)

2-21 (0.4 g, 2.22 mmol) in DMF (6 ml) was treated at room temperature with CDI (4.44 mmol). After stirring for 10 minutes, β-alanine t-butylester HCl (Bachem) (0.20 g, 1.11 mmol) was added and the reaction mixture was stirred for 18 hours. The solvent was removed and the residue acidified to pH 2-3 with 10% KHSO<sub>4</sub> solution extracted with EtOAc and this was dried (MgSO<sub>4</sub>) and

concentrated. The residue was purified by flash chromatography on silica gel eluting with CH<sub>2</sub>Cl<sub>2</sub>/MeOH/HOAc (9/0.25/0.25).

5 4-Methyl-3-{N-[2-(N'-Boc-4-piperidiny)ethyl]-N''-2-(t-butyloxy-carbonylethyl)}-1,3-benzenedicarboxamide (2-23)

A solution of 2-22 (0.33 g, 1.07 mmol) in CH<sub>3</sub>CN (5 ml) was treated with 1-6 (0.38 g, 1.6 mmol) at room temperature to give a clear solution. This was treated with NMM (2.7 mmol) followed by BOP (1.6 mmol) and the reaction mixture was stirred for 18 hours. 10 This was then diluted with EtOAc, washed with H<sub>2</sub>O, 10% KHSO<sub>4</sub>, saturated NaHCO<sub>3</sub>, brine, dried (MgSO<sub>4</sub>) and concentrated. The residue was purified by flash chromatography on silica gel eluting with 60% EtOAc/hexanes to give pure 2-23. R<sub>f</sub> 0.26 (silica, 60% EtOAc/hexanes).

15 4-Methyl-[2-(4-piperidiny)ethyl]-N'-2-(carboxyethyl)-1,3-benzenedicarboxamide (2-24)

A solution of 2-23 (0.23 mmol) in EtOAc (5 ml) was treated with HCl gas as described for 3-4 to give 2-24 as a white solid. 20 <sup>1</sup>H NMR (300 MHz, D<sub>2</sub>O) δ 1.12 (2H, t), 1.33 (2H, m), 1.52 (2H, m), 1.60 (1H, m), 1.90 (2H, bd), 2.26 (3H, s), 2.58 (2H, t), 2.88 (2H, bt), 3.32 (4H, m), 3.52 (2H, t), 7.29 (1H, d), 7.52 (1H, s), 7.59 (1H, dd).

N-[(2-(N-Boc-4-Piperidiny)ethyl)-N'-[(2-carboxyethyl)-3,5-pyridine-dicarboxamide (5-2)]

30 A solution of 3,5-pyridinedicarboxylic acid (Aldrich) (5-1) (0.74g, 4.4 mmoles) in DMF (40 ml) at room temperature was treated with carbonyldiimidazole (CDI) (1.4g, 8.8 mmoles) and after 1 hr, 1-6 (4.4 mmoles) was added. Then, β-alanine ethyl ester hydrochloride (0.67g, 4.4 mmoles) was added followed by N-methylmorpholine (NMM) (13.2 mmoles) and the resulting solution was stirred at room temperature for 16 hrs. The reaction was diluted with EtOAc and washed with H<sub>2</sub>O, 10% KHSO<sub>4</sub> solution, brine and dried (Na<sub>2</sub>SO<sub>4</sub>).

- 62 -

Solvent removal provided the desired dicarboxamide as an oil, which was submitted without further purification to the next reaction.

This oil was dissolved in THF(1)/MeOH(1)/H<sub>2</sub>O(1) (15 ml) and LiOH (21 mmoles) was added. After stirring at room temperature for 1 hr the reaction mxt was diluted with EtOAc/H<sub>2</sub>O. The aqueous phase was separated and adjusted to pH 5 with 10% KHSO<sub>4</sub> soln and extracted with EtOAc. The organic phase was washed with H<sub>2</sub>O, brine and dried (Na<sub>2</sub>SO<sub>4</sub>). Solvent removal gave the desired acid (5-2) as a white solid.

4-(N-t-Butyloxycarbonylpiperidinyl)methylamine (6-2)

A solution of 4-(piperidinyl)methylamine (Aldrich) (2-1) (22.8 g, 0.2 mmoles) in toluene (250 ml) was treated with benzaldehyde (21.2 g, 0.2 mmoles) at room temperature and the resulting mixture was heated at reflux for 3 hours with the aid of a Dean-Stark trap for water removal. The cooled reaction mixture containing the desired Schiff's base was treated portionwise with di-t-butyl dicarbonate (47.96 g, 0.22 moles) and the resulting solution was stirred at room temperature for 16 hours. The solvent was then removed and the residue was cooled to 0-5°C and treated with 1N KHSO<sub>4</sub> (220 ml) with stirring for 3 hours. The resulting reaction mixture was extracted with ether (3 x 200 ml) and then made basic with 1N KOH solution and extracted with CHCl<sub>3</sub> (4 x 75 ml). The combined organic extract was washed with brine, dried (Na<sub>2</sub>SO<sub>4</sub>) filtered through celite, and the solvent removed to provide pure 6-2 as a clear oil. <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 1.13 (2H, m), 1.45 (9H, s), 1.60 (1H, m), 1.74 (2H, d), 2.68 (4H, m), 4.15 (2H, bd).

20

Methyl 2(S), 3-Diaminopropanoate (9-8)

Methanol (400 mL) was cooled to 0°C and thionyl chloride (217 mL, 3.0 moles, 20 eq) was added dropwise under argon. After addition was completed, the solution was warmed to room temperature for 20 minutes. 2(S), 3-Diaminopropanoic acid (Schweizerhall) (20 g, 0.243 mole) was crushed to a fine powder and added to the solution. The reaction was heated to reflux for 48 hours, at which time TLC showed a small amount of starting material remaining. An additional portion of methanol (100 mL) and thionyl chloride (72 mL) was prepared as before and added to the reaction at room temperature; the reaction was then stirred overnight at room temperature. The reaction was worked up by removal of solvent at 40°C in vacuo, to provide 9-8. R<sub>f</sub> 0.72 (9:1:1 EtOH/H<sub>2</sub>O/NH<sub>4</sub>OH).

4-(N-BOC-4-Hydroxypiperidin-4-yl)bromobenzene (10-3)

A solution of 1,4-dibromobenzene (7.10 g, 30.1 mmoles) in THF (50 ml) at  $-78^{\circ}$  was treated with n-BuLi (18.7 ml, 30 mmoles, 1.6 M/hexane) and after 1.0 hour stirring at  $-78^{\circ}$ , N-BOC-4-piperidone (10-2) (2.0 g, 10.04 mmoles) in THF (2 ml) was added. After 1 hour the cooling bath was removed and the reaction mixture was stirred for 2 hours. The reaction mixture was then diluted with EtOAc, washed with water, 10% KHSO<sub>4</sub>, brine, dried (MgSO<sub>4</sub>) and concentrated. The residue was purified by flash chromatography on silica gel eluting with 20% EtOAc/hexanes to give pure 10-3, R<sub>f</sub> 0.15 (silica, 20% EtOAc/hexanes).

A mixture of 10-3 (500 mg, 1.4 mmoles), ethyl crotonate (1.7 mL, 3.8 mmoles), Pd(OAc)<sub>2</sub> (31 mg, 0.14 mmoles), NEt<sub>3</sub> (0.78 mL, 8 mmoles), tri-*o*-tolylphosphine (170 mg, 0.56 mmoles), and CH<sub>3</sub>CN (7 mL) was heated in a sealed tube at 100°C for 24 hours. The cooled reaction mixture was diluted with EtOAc and then washed with H<sub>2</sub>O, 10% KHSO<sub>4</sub>, saturated NaHCO<sub>3</sub>, and brine, dried (MgSO<sub>4</sub>), and concentrated. Flash chromatography (silica, 25% EtOAc/hexanes) gave 12-1 as a waxy yellow solid. R<sub>f</sub> 0.33 (silica, 25% EtOAc/hexanes). <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 7.49 (m, 4H), 6.16 (s, 1H), 4.23 (q, J=7Hz, 2H), 4.05 (m, 2H), 3.27 (m, 2H), 2.59 (s, 3H), 2.00 (m, 2H), 1.72 (m, 3H), 1.46 (s, 9H), 1.33 (t, J=7Hz, 3H).

Ethyl 3-[4-(N-BOC-4-hydroxypiperidin-4-yl)phenyl]butyrate (12-2)

A mixture of 12-1 (400 mg, 1.0 mmoles), 10% Pd/C (160 mg), and CH<sub>3</sub>OH (5 mL) was stirred at ambient temperature under a hydrogen atmosphere for 3.0 hours. The reaction mixture was filtered through a celite pad and the filtrate concentrated to give 12-2 as a yellow oil. R<sub>f</sub> 0.33 (silica, 30% EtOAc/hexanes).

5 A stirring solution of 24-3 (250 mg, 1.1 mmol), 19-2a (368 mg, 1.1 mmol), NMM (442 mg, 4.4 mmol), and CH<sub>3</sub>CN (5 mL) at ambient temperature was treated with BOP (483 mg, 1.1 mmol). After 20 h the reaction mixture was diluted with EtOAc and then washed with H<sub>2</sub>O, sat. NaHCO<sub>3</sub>, 10% KHSO<sub>4</sub> and brine, dried (MgSO<sub>4</sub>) and concentrated. Flash chromatography (silica, 40% EtOAc/hexanes) gave  
10 24-4 as a white solid. TLC R<sub>f</sub> = 0.46 (silica, 50% EtOAc/hexanes); <sup>1</sup>H NMR (300 MHz, 10% CD<sub>3</sub>OD/CDCl<sub>3</sub>)  $\delta$  7.85 (m, 2H), 7.76 (d, J = 11 Hz, 2H), 7.52 (m, 3H), 6.92 (d, J = 11 Hz, 2H), 4.06 (m, 2H), 3.99 (m, 1H), 3.82-3.60 (m, 4H), 1.99 (m, 4H), 1.26 (s, 9H).

15 4-[4(N-Morpholino)butyloxy]benzoyl-2(S)-phenylsulfonylamino- $\beta$ -alanine tert-butyl ester (24-5)

A stirring solution of 24-4 (500 mg, 1.0 mmol), morpholine (437  $\mu$ L, 5.0 mmol), and DMF (5 mL) was heated at 80°C for 20 hours. The cooled reaction mixture was diluted with EtOAc and  
20 then washed with H<sub>2</sub>O and brine, dried (MgSO<sub>4</sub>) and concentrated. Flash chromatography (silica, EtOAc) gave 24-5 as a yellow solid. TLC R<sub>f</sub> 0.14 (silica, EtOAc); <sup>1</sup>H NMR (300 MHz, CD<sub>3</sub>OD)  $\delta$  7.83 (m, 2H), 7.74 (d, J = 11 Hz, 2H), 7.50 (m, 3H), 6.96 (d, J = 11 Hz, 2H), 4.10 (m, 3H), 3.73-3.40 (m, 8H),

4-[4-(N-Morpholino)butyloxy]benzoyl-2(S)-phenylsulfonylamino- $\beta$ -alanine (24-6)

30 A solution of 24-5 (430 mg, 0.76 mmol), TFA (5 mL), and CH<sub>2</sub>Cl<sub>2</sub> (5 mL) was stirred at ambient temperature for 3.0 hours. Concentration of the reaction mixture followed by azeotropic removal of residual TFA with toluene gave crude 24-6. Flash chromatography (silica, 10:0.1:0.1 ethanol/H<sub>2</sub>O/NH<sub>4</sub>OH) gave 24-6 as a white solid. TLC R<sub>f</sub> = 0.52 (silica, 10:0.1:0.1 ethanol/NH<sub>4</sub>OH/H<sub>2</sub>O);

SCHEME 25 CONT'DEthyl (N-Benzylimidazol-4-yl)acetate (25-2)

To a magnetically stirred suspension of NaH (1.1 g, 26 mmol) in THF (25°C) at 0°C was added 25-1 (3.8 g, 24.6 mmol) in THF (15 mL) dropwise over 30 min., followed by removal of the cooling bath. After 3 hours benzyl bromide (2.8 mL, 23.4 mmol) added. After 20 hours the mixture was diluted with CH<sub>2</sub>Cl<sub>2</sub> and then washed with H<sub>2</sub>O, dried (MgSO<sub>4</sub>) and concentrated. Flash chromatography (silica, 40% (CHCl<sub>3</sub>/NH<sub>3</sub>)/EtOAc) gave 25-2 as a pale yellow liquid. TLC R<sub>f</sub> = 0.15 (silica, 40% (CHCl<sub>3</sub>/NH<sub>3</sub>)/EtOAc);

<sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 7.47 (s, 1H), 7.40-7.15 (m, 5H), 6.87 (s, 1H), 5.07 (s, 2H), 4.26 (q, J = 7 Hz, 2H), 3.63 (s, 2H), 1.26 (t, J = 7 Hz, 3H).

(N-Benzylimidazol-4-yl)ethanol (25-3)

A solution of 25-2 (4.6 g, 18.8 mmol) in THF (50 mL) at ambient temperature was treated dropwise with LiAlH<sub>4</sub> (9.4 mL, 9.4 mmol, 1M in THF). After stirring for 1 hour the reaction was quenched with a saturated sodium potassium tartrate solution. The mixture was then poured into EtOAc and washed with H<sub>2</sub>O and brine, dried (MgSO<sub>4</sub>) and concentrated to yield 25-3 as a yellow oil.

(N-Benzylloxycarbonyl-4-piperazinyl)phenol 28-2

4-Piperazinyl phenol (Schweizerhall, 5 g, 30.5 mmol) was dissolved in THF (150 mL), treated with diisopropylethylamine (12.2 mL, 70.0 mmol), and cooled to 0°C. Benzylchloroformate (4.4 mL, 30.5 mmol) was added and the reaction was allowed to warm to room temperature and stir overnight. The solution was diluted with EtOAc, washed with water and brine, dried over MgSO<sub>4</sub>, filtered and evaporated to give a brown oil. Column chromatography (SiO<sub>2</sub>, 40% EtOAc/hexanes) gave 28-2 as a white solid. R<sub>f</sub> (40% EtOAc/hexanes) 0.34.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.4-7.3 (m, 5H), 6.8 (d, 2H), 7.75 (d, 2H), 5.1 (s, 2H), 3.65 (m, 4H), 3.0 (m, 4H).

t-Butyl 2-(S)(t-Butoxycarbonylamino)-4-[4-(N-benzylloxycarbonyl-piperazinyl)phenoxy]butanoate (28-4)

A solution of NaH (2.5 g, 60% dispersion in mineral oil, 1.5 mmol) in DMF (5 mL) was treated with 28-2, (220 mg, 0.7 mmol) and stirred for 10 minutes. A solution of 28-3 (JACS, 1990, 112, 760) (0.2 g, 0.59 mmol) in DMF (2 mL) is added dropwise over 5 minutes. The dark red solution was stirred for 1 hour, then diluted with EtOAc, washed with 10% KHSO<sub>4</sub> and brine, dried over MgSO<sub>4</sub>, filtered and evaporated to yield a tan oil. Column chromatography (SiO<sub>2</sub>, 30% EtOAc/hexanes) gave 28-4 as a colorless oil. R<sub>f</sub> (30% EtOAc/hexanes) 0.3.

2(S)-(Benzenesulfonylamino)-4-[4-(N-benzyloxycarbonyl piperazinyl)-phenoxy]butanoic acid (28-6)

A solution of 28-5 (0.97 g, 2.2 mmol) in H<sub>2</sub>O (26 mL) was cooled to 0°C and treated with 1N NaOH (2.6 mL) and dioxane (13 mL). The solution was treated simultaneously with benzenesulfonyl chloride (0.56 mL in 1.5 mL dioxane, 4.4 mmol) and 1N NaOH so that the pH of the solution remained >10. The reaction was stirred for 1 hour at 0°C, then treated in a similar manner with another portion of benzene sulfonyl chloride, and stirred for 1 hour. The solution was diluted with 10% KHSO<sub>4</sub> and washed with EtOAc. The organic layers were dried (brine, MgSO<sub>4</sub>), filtered and evaporated to give a tan oil. Column chromatography (9:0.5:0.5 CH<sub>2</sub>Cl<sub>2</sub>/MeOH/HOAc) gave 28-6 as a white solid. R<sub>f</sub> (9:0.5:0.5 CH<sub>2</sub>Cl<sub>2</sub>/MeOH/HOAc) 0.26.

Methyl 4(4-chlorobut-2-enyloxy)benzoate (30-2)

A solution of 9-1 (1.2g, 8 mmol) and 1,4 dichloro 2-butene (1.6 mL, 17 mmol) (30-1) (Aldrich) in DMF (30 mL) was treated with Cs<sub>2</sub>CO<sub>3</sub> (3.9g, 12 mmol) for 24 h. The solvent was removed in vacuo and the residue chromatographed (10% EtOAc/Hexanes) to give 30-2 as a white solid. R<sub>f</sub> (20% acetone/hexane) 0.42.

<sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 8.1 (d, 2H), 7.0 (d, 2H), 6.1 (s, 2H), 4.7 (s, 2H), 4.2 (m, 2H), 3.98 (s, 3H).

Methyl 4-[(4-Pyrrolidinyl-but-2-enyl)oxy]benzoate (30-3)

A solution of 30-2 (1.3 g, 5.36 mmol) in DMF (15 mL) was treated with pyrrolidine (2.4 mL, 29 mmol) and heated at 80°C for 78 h. The solvent was removed in vacuo and the residue was absorbed onto SiO<sub>2</sub> and chromatographed (SiO<sub>2</sub>, 0-7% CH<sub>3</sub>OH in CH<sub>2</sub>Cl<sub>2</sub> to give 30-3 as a yellow oil. R<sub>f</sub> (10% CH<sub>3</sub>OH/CH<sub>2</sub>Cl<sub>2</sub>) 0.24.

<sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 8.0 (d, 2H), 6.9 (d, 2H), 6.0 (m, 2H), 4.6 (d, 2H), 3.85 (s, 3H), 3.28 (d, 2H), 2.7 (m, 4H), 1.85 (m, 4H).

4-[(4-Pyrrolidinylbut-2-enyl)oxy]benzoic acid (30-4)

A solution of 30-3 (1.14 g, 4.14 mmol) in 6 N HCl (30 mL) was heated at 60°C for 24 h. The solution was concentrated and the residue was chromatographed (SiO<sub>2</sub>, 9:1:1 EtOH/H<sub>2</sub>O/NH<sub>4</sub>OH) to give a dark yellow oil. The HCl salt was prepared by dissolving the oil in CH<sub>2</sub>Cl<sub>2</sub> and adding 1 M HCl/Et<sub>2</sub>O. The solvents were removed and the residue washed with Et<sub>2</sub>O to give 30-4 as an off-white solid. R<sub>f</sub> (9:1:1 EtOH/H<sub>2</sub>O/NH<sub>4</sub>OH) 0.2.

4-[(4-Pyrrolidinylbut-2-enyl)oxy]benzoyl-2(S)-phenylsulfonylamino-β-alanine t-butyl ester (30-5)

A suspension of 30-4 (0.77 g, 2.6 mmol) in DMF (7 mL) was treated with N-methyl morpholine (1.5 mL, 14 mmol), CDI (0.5 g, 3.1 mmol) and 19-2a (1.0 g, 3.2 mmol). Concentration and chromatography (SiO<sub>2</sub>, 5% CH<sub>3</sub>OH/CH<sub>2</sub>Cl<sub>2</sub>), followed by separation by

15 N-Diphenylmethyl-3-(carboethoxymethylidene)-3-azetidine (33-2)

To a solution of oxalyl chloride (0.10 mL, 1.1 mmol), in  $CH_2Cl_2$  (4.7 mL) at  $-78^\circ C$  was added DMSO (0.12 mL, 1.7 mmol) dropwise. After gas evolution subsided (~5 min), a solution of 33-1 (for preparation see; JOC, 37, 3953, 1972 A.G. Anderson, R. Lok) (0.20 g, 0.84 mmol) in  $CH_2Cl_2$  (1.5 mL) was added. After 30 min.,  $NEt_3$  (0.40 mL, 2.8 mmol) was added and after 10 min. the cooling bath removed. After 20 min. TLC analysis indicated no starting material remained. The ylide (0.32 g, 0.92 mmol) was then added and the reaction stirred for 20 h. The reaction mixture was diluted with pet. ether and then washed with  $H_2O$ , 5%  $KHSO_4$ , and brine, dried ( $MgSO_4$ ), and concentrated. Flash chromatography (silica, (15% EtOAc/hex) gave 33-2 (0.14 g) as a colorless oil.  $R_f$  0.43 (silica, 15% EtOAc/hexanes).

tert-Butyl 2(S)-n-Butylsulfonylamino-5-[4-(2-N-Boc-piperidin-4-yl)-ethyloxyphenyl]pent-4-enoate (36-5)

A mixture of 36-4 (402 mg, 1.05 mmol), 36-1 (361 mg, 1.18 mmol), palladium (II) acetate (24.0 mg, 0.10 mmol), triethylamine (0.29 ml, 1.99 mmol), tri-*o*-tolylphosphine (91 mg, 0.33 mmol), and CH<sub>3</sub>CN (5 ml) was placed in a sealed tube and heated at 100° for 18 hr. The solvent was evaporated and the residue subjected to flash chromatography (silica, 30% EtOAc/hexanes) to give 36-5 as a pale yellow oil.

<sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 7.25 (d, J = 11 Hz, 2H), 6.85 (d, J = 11 Hz, 2H), 6.41 (d, J = 13 Hz, 1H), 5.95 (m, 1H), 4.93 (d, J = 6 Hz, 1H), 4.2 - 3.95 (m, 6H), 2.98 (m, 2H), 2.81 (m, 4H), 1.81 (m, 7H), 1.50 (s, 9H), 1.43 (s, 9H), 1.12 (m, 2H), 0.95 (m, 3H).

2(S)-n-Butylsulfonylamino-5[4-(2-N-Boc-piperidin-4-yl)ethyloxyphenyl]pentanoic acid (36-6)

A solution of 36-5 (184 mg, 0.30 mmol) in 50 mL CH<sub>3</sub>OH was treated with 24 mg of 10% Pd on C and hydrogenated on a Parr apparatus at 40 psi for 12 hr. The catalyst was removed by filtration through a bed of celite and the solution concentrated to give a colorless oil. This material was dissolved in 5 mL CH<sub>2</sub>Cl<sub>2</sub>, cooled to 0° C and treated with TFA (2 mL). After stirring for 3 hr, the solvent was removed and the residue purified by reverse phase chromatography giving 36-6 as a white solid, following lyophilization.

tert-Butyl 2(S)-n-Butylsulfonylamino-5-[4-(2-N-Boc-piperidin-4-yl)-ethyloxyphenyl]-5-oxopentanoate (36-7)

Oxygen was bubbled into a mixture of CuCl (10 mg, 0.11 mmol), PdCl<sub>2</sub> (6.0 mg, 0.03 mmol), and 5 ml of DMF which contained 10% H<sub>2</sub>O. After 0.5 hr., a solution of 36-5 in aqueous DMF (1.5 ml) was added and the mixture stirred under an O<sub>2</sub> atmosphere for 12 hr. The reaction was quenched by the addition of 10% KHSO<sub>4</sub> (3 ml) and extracted with CH<sub>2</sub>Cl<sub>2</sub> (2 x 20 ml). The pooled CH<sub>2</sub>Cl<sub>2</sub> extracts were dried (MgSO<sub>4</sub>) concentrated and chromatographed (silica, 50% EtOAc/hexanes) to give 36-7 as a colorless glass. FAB MS, 611 (M+1). <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 7.95 (d, J = 11 Hz, 2H), 6.95 (d, J = 11 Hz, 2H), 5.13 (d, J = 7 Hz, 1H), 4.15 (m, 5H), 3.20 (m, 2H), 2.98 (m, 2H), 2.71 (m, 2H), 2.28 (m, 1H), 1.98 (m, 1H), 1.81 (m, 5H), 1.52 (s, 9H), 1.48 (s, 9H), 1.23 (m, 2H), 0.98 (m, 3H).

2 (S)-n-Butylsulfonylamino-5-[4-2-piperidin-4-yl)ethyloxyphenyl]-5-oxopentanoic acid (36-8)

A solution of 36-7 (64 mg, 0.105 mmol) in 10 ml EtOAc was cooled to -10°C and HCl gas introduced for 10 min. After stirring at -10°C for 2 hr the solution was evaporated and the residue purified by reverse phase chromatography (C18 column, 0.1% TFA/CH<sub>3</sub>CN gradient) to give 36-8 as a white powder, following lyophilization. <sup>1</sup>H NMR (300 MHz, D<sub>2</sub>O) 7.78 (d, J = 11 Hz, 2H), 6.85 (d, J = 11 Hz, 2H), 4.08 (m, 2H), 3.85 (m, 1H), 3.26 (d, J = 13.8 Hz, 2H), 3.01-2.8 (m, 6H), 2.08 (m, 2H), 1.80 (d, J = 14 Hz, 2H), 1.68 (m, 1H), 1.60 (m, 2H), 1.46 (m, 2H), 1.35 (m, 2H), 1.08 (m, 2H), 0.81 (m, 3H).

Therapeutic Treatment

Compounds of the invention may be used for inhibiting integrin protein-complex function relating to cell attachment activity. They may be administered to patients where inhibition of human or mammalian platelet aggregation or adhesion is desired. Thus, they may find utility in surgery on peripheral arteries (arterial grafts, carotid endarterectomy) and in cardiovascular surgery where manipulation of

- 206 -

arteries and organs, and/or the interaction of platelets with artificial surfaces, leads to platelet aggregation and consumption. The aggregated platelets may form thrombi and thromboemboli. Compounds of the invention may be administered to these surgical patients to prevent the formation of thrombi and thromboemboli.

These compounds may be administered by any convenient means which will result in its delivery into the blood stream in substantial amount including continuous intravenous or bolus injection or oral methods. Compositions of the invention include compounds of the invention and pharmaceutically acceptable carriers, e.g. saline, at a pH level of for example 7.4, suitable for achieving inhibition of platelet aggregation. They may also be used in combination with anticoagulants such as heparin or warfarin. Intravenous or oral administration are presently contemplated as the preferred administration routes.

In one exemplary application, a suitable amount of compound is intravenously administered to a heart attack victim undergoing angioplasty. Administration occurs during or several minutes prior to angioplasty, and is in an amount sufficient to inhibit platelet aggregation, e.g. an amount which achieves a steady state plasma concentration of between about 0.01-30  $\mu$ M, preferably between about 0.03-3  $\mu$ M. When this amount is achieved, an infusion of between about 0.1-100  $\mu$ g per kilo per min., preferably between about 1-20  $\mu$ g per kilo per min., most preferably 1-10  $\mu$ g per kilo per min. is maintained to inhibit platelet aggregation. Advantageously, compounds of the present invention may be administered in divided doses of two, three, or four times daily. Should the patient need to undergo bypass surgery, administration may be stopped immediately and will not cause complications during surgery that would be caused by other materials such as aspirin or monoclonal antibodies.

Furthermore, preferred compounds for the present invention can be administered in intranasal form via topical use of suitable intranasal vehicles, or via transdermal routes, using those forms of transdermal skin patches well known to those of ordinary skill in that art. To be administered in the form of a transdermal delivery system,

- 207 -

the dosage administration will, of course, be continuous rather than intermittent throughout the dosage regime.

Oral dosages of the present invention, when used for the indicated effects, will range between about 0.01 mg per kg of body weight per day (mg/kg/day) to about 500 mg/kg/day and preferably 1.0-400 mg/kg/day and most preferably 1-300 mg/kg/day. The present invention also includes a pharmaceutical composition comprising compounds of the present invention and tissue type plasminogen activator or streptokinase. The invention also includes a method for promoting thrombolysis and preventing reocclusion in a patient which comprises administering to the patient an effective amount of compositions of the invention.

The present invention may be embodied in other specific forms without departing from the spirit or essential attributes thereof. Thus, the specific examples described above should not be interpreted as limiting the scope of the present invention.

Using the methods previously described, the following preferred compounds were prepared and evaluated:

While the invention has been described and illustrated in reference to certain preferred embodiments thereof, those skilled in the art will appreciate that various changes, modification and substitutions can be made therein without departing from the spirit and the scope of the invention. For example, effective dosages other than the preferred doses as set forth hereinabove may be applicable as a consequence of variations in the responsiveness of the mammal being treated for severity of clotting disorders or emboli, or for other indications for the compounds of the invention indicated above. Likewise, the specific pharmacological responses observed may vary according to and depending upon the particular active compound selected or whether there are present pharmaceutical carriers, as well as the type of formulation and mode of administration employed, and such expected variations or differences in the results are contemplated in accordance with the objects and practices of the present invention. It is intended, therefore, that the invention be limited only by the scope of the claims which follow and that such claims be interpreted as broadly as is reasonable.

10 5. A method of blocking fibrinogen from acting at its platelet receptor site in a mammal, including a human comprising administering a pharmacologically effective amount of a compound as claimed in Claim 1.

15 6. A method of preventing thrombus and embolus formation in a mammal, including a human, in need thereof, comprising administering a pharmacologically effective amount of a compound as claimed in Claim 1.

20 7. A method of treating thrombus and embolus formation in a mammal, including a human, in need thereof, comprising administering a pharmacologically effective amount of a compound as claimed in Claim 1.

25 8. A method of inhibiting aggregation of blood platelets in a mammal, including a human, comprising administering a pharmacologically effective amount of a compound as claimed in Claim 1.

30 9. A method of blocking fibrinogen from acting at its platelet receptor site in a mammal, including a human comprising administering a pharmacologically effective amount of a compound of Claim 4.

10. A method of preventing thrombus and embolus formation in a mammal, including a human, in need thereof, comprising administering a pharmacologically effective amount of compound of Claim 4.

5 11. A method of treating thrombus and embolus formation in a mammal, including a human, in need thereof, comprising administering a pharmacologically effective amount of a compound of Claim 4.

10 12. A method of inhibiting aggregation of blood platelets in a mammal, including a human, comprising administering a pharmacologically effective amount of a compound of Claim 4.

13. The method as claimed in Claim 6, in which said compound is co-administered with an anticoagulant agent.

15 14. The method as claimed in Claim 7, in which said compound is co-administered with an anticoagulant agent.

15. The method as claimed in Claim 8, in which said compound is co-administered with an anticoagulant agent.

20 16. The method as claimed in Claim 6, in which said compound is co-administered with a thrombolytic agent.

25 17. The method as claimed in Claim 7, in which said compound is co-administered with a thrombolytic agent.

18. The method as claimed in Claim 9, in which said compound is co-administered with a thrombolytic agent.

30 19. The method as claimed in Claim 8, in which said compound is co-administered with a thrombolytic agent.

20. The method as claimed in Claim 6, in which said compound is co-administered with a platelet anti-aggregation agent.

- 228 -

21. The method as claimed in Claim 7, in which said compound is co-administered with a platelet anti-aggregation agent.

5 22. The method as claimed in Claim 8, in which said compound is co-administered with a platelet anti-aggregation agent.

23. A pharmaceutical composition, comprising a compound as claimed in Claim 1, and a pharmaceutically acceptable carrier.

10 24. A pharmaceutical composition comprising the compounds as claimed in Claim 1, a pharmaceutically acceptable carrier and a compound taken from the group consisting of thrombolytic agents, platelet anti-aggregation agents and anti-coagulant agents.

15 25. The composition as claimed in Claim 19, in which said pharmaceutically acceptable carrier consists of a sustained release pharmaceutical formulation.

20 26. A pharmaceutical composition for inhibiting the binding of fibrinogen to blood platelets in a mammal, including a human, comprising a compound of Claim 1 and a pharmaceutically acceptable carrier.

25 27. A pharmaceutical composition for inhibiting the aggregation of blood platelets in a mammal, including a human, comprising a compound of Claim 1 and a pharmaceutically acceptable carrier.

30 28. A pharmaceutical composition for inhibiting the binding of fibrinogen to blood platelets in a mammal, including a human, comprising a compound of Claim 4 and a pharmaceutically acceptable carrier.

- 229 -

29. A pharmaceutical composition for inhibiting the aggregation of blood platelets in a mammal, including a human, comprising a compound of Claim 4 and a pharmaceutically acceptable carrier.

5

30. A composition for inhibiting the aggregation of blood platelets in a mammal, including a human, comprising a compound of Claim 1 in combination with a thrombolytic agent and a pharmaceutically acceptable carrier.

10

31. A composition for inhibiting the aggregation of blood platelets in a mammal, including a human, comprising a compound of Claim 1 in combination with an anti-coagulant and a pharmaceutically acceptable carrier.

15

32. A composition for preventing thrombus or embolus formation in a mammal, including a human, comprising a compound of Claim 1 and a pharmaceutically acceptable carrier.

20

33. A composition for preventing thrombus or embolus formation in a mammal, including a human, comprising a compound of Claim 1 in combination with a thrombolytic agent and a pharmaceutically acceptable carrier.

25

34. A composition for preventing thrombus or embolus formation in a mammal, including a human, comprising a compound of Claim 1 in combination with an anti-coagulant and a pharmaceutically acceptable carrier.

30

35. A composition for treating thrombus or embolus formation in a mammal, including a human, comprising a compound of Claim 1 and a pharmaceutically acceptable carrier.

- 230 -

36. A composition for treating thrombus or embolus formation in a mammal, including a human, comprising a compound of Claim 1 in combination with a Thrombolytic agent and a pharmaceutically acceptable carrier.

37. A composition for treating thrombus or embolus formation in a mammal, including a human, comprising a compound of Claim 1 in combination with an anti-coagulant and a pharmaceutically acceptable carrier.

38. A composition for treating thrombus or embolus formation in a mammal, including a human, comprising a compound of Claim 1 in combination with an anti-platelet agent and a pharmaceutically acceptable carrier.

39. A method for inhibiting the aggregation of blood platelets in a mammal, including a human, comprising administering the composition of Claim 24.

40. A method for preventing or treating thrombus or embolus formation in a mammal, comprising administering the composition of Claim 25.

41. A method for inhibiting the aggregation of blood platelets in a mammal, including a human, comprising administering the composition of Claim 29.

42. A compound of Claim 1 for use in inhibiting the binding of fibrinogen to blood platelets, inhibiting the aggregation of blood platelets, treating thrombus or embolus formation, or preventing thrombus or embolus formation in a mammal, including a human.

43. A compound of Claim 2 for use in inhibiting the binding of fibrinogen to blood platelets, inhibiting the aggregation of

- 231 -

blood platelets, treating thrombus or embolus formation, or preventing thrombus or embolus formation in a mammal, including a human.

5           44.    A compound of Claim 3 for use in inhibiting the binding of fibrinogen to blood platelets, inhibiting the aggregation of blood platelets treating thrombus or embolus formation, or preventing thrombus or embolus formation in a mammal, including a human.

10           45.    A compound of Claim 4 for use in inhibiting the binding of fibrinogen to blood platelets, inhibiting the aggregation of blood platelets, treating thrombus or embolus formation, or preventing thrombus or embolus formation in a mammal, including a human.

# INTERNATIONAL SEARCH REPORT

International application No.  
PCT/US93/11623

## Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:  
because they relate to subject matter not required to be searched by this Authority, namely:
  
2. ☐ Claims Nos.:  
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
  
3. ☐ Claims Nos.:  
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

## Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

Please See Extra Sheet.

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☒ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:  
1-12,23,26-29,32,35 AND 39
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.  
☐ No protest accompanied the payment of additional search fees.

**B. FIELDS SEARCHED**

Minimum documentation searched

Classification System: U.S.

514/315,317,327,328,329,330,331; 546/192,216,217,218,219,220,221,223,224,225,227,229,232,233,234,235,236,237,238,239,240,242,244,245,246,247,248

**BOX II. OBSERVATIONS WHERE UNITY OF INVENTION WAS LACKING**

This ISA found multiple inventions as follows:

(TELEPHONE PRACTICE)

GROUP I. CLAIMS 1 TO 4,5,23,24,26-38,42-45 DRAWN TO ARYL  
DERIVATIVES, WHERE N=0

GROUP II. CLAIMS 6,13,16,20 DRAWN TO A SECOND METHOD OF USE.

GROUP III. CLAIMS 7,10,11,14,17,21,40, DRAWN TO A THIRD METHOD OF  
USE.GROUP IV. CLAIMS 8,12,15,19,22,25,39, DRAWN TO A FOURTH METHOD OF  
USE.

GROUP V. CLAIMS 9,18, DRAWN TO A FIFTH METHOD OF USE.

GROUP VI. CLAIMS 1-5,23,24,26-38,42-45 DRAWN TO ARYL DERIVATIVES  
WHERE N=1.GROUP VII. CLAIMS 1-5,23,24,26-38,42-45 DRAWN TO ARYL DERIVATIVES  
WHERE N=2.GROUP VIII. CLAIMS 1-2,23,24,26-38,42-45 DRAWN TO ARYL DERIVATIVES  
WHERE N=3.GROUP IX. CLAIMS 1-2,23,24,26-38,42-45 DRAWN TO ARYL DERIVATIVES  
WHERE N=4

The compounds lack a common core. They are so widely divergent that there is no common structural feature to which a particular utility can be attributed. A reference anticipating one member of the groups will not render another obvious. There is therefore a lack of unity of invention for the foregoing reasons. See 37CFR1.475b(2) AND d. Therefore there is no single general inventive concept present. A first method will be searched with the main invention compound.
